Digital Signage and Kiosk Systems “Made in ROMANIA”

Founded in 2004, **InfoTouch Systems** focused on touchscreen technology from the beginning, introducing the Romanian market among the first info-kiosks manufactured under our brand.

We develop and manufacture series device, small or high volume for:
– terminals for self-service: self-order, self-check-in/ check-out, payment terminals, ticketing vending machine.
– digital signage terminals: big size totems indoor/outdoor, small size displays for POS advertising, multi-touch tables.
– multimedia interactive kiosk terminals with multi-touch technology.

Also, we make custom design terminals with specific hardware and can develop all-in-one solutions: hardware and software.

InfoTouch self-service interactive terminals

InfoTouch Self-Order
for fast-food and restaurants.

The automation of the order process in a fast-food is not necessarily a trend, but a response to the main challenges the HORECA industry is dealing with: the lack of staff, the increase of the costs with the waging, the customers' dissatisfaction, and the increase of the serving / payment times.
Such problems can find their solving through the implementation of the self-order systems. The implementation of such solutions improves the order experience of the customers, increases the accuracy of the orders, leads to the increase of the average amount spent by a customer per order, and permits a large flexibility in the composition and presentation of the menu.

InfoTouch Self-Service
for medical clinics.

The automation of the reception process of the patient scheduled for a medical consultation is not necessarily a whim, but it is the answer to the main challenges the medical industry is dealing with: the lack of staff, the increase of the costs with waging, the customers' dissatisfaction, the increase of the waiting / payment times, the problems finding their solving through the implementation of the self-service systems. The implementation of such solutions improves the check-in / checkout experience of the customers, efficiencies the clients reception process in the healthcare unit, provides the information upon the medical staff, decreases the payment times of the consultations.

InfoTouch Self-Check-in
for hotels.

The check-in / check-out automation process in a hotel does not necessarily mean a trend, but the response to the main challenges the HORECA industry is dealing with: the lack of staff, the increase of the costs with waging, the customers' dissatisfaction, the increase of the serving / payment times, challenges which can find their solving through the implementation of the self-service systems. The implementation of such solutions improves the check-in / check-out experience of the customers, efficiencies and increases the operation time of the reception of the hotel to 24 / 7 and removes the manual operation errors.

InfoTouch Self-Checkout
for gas station/mini market

The automation of the payment process in a gas station is not necessarily a trend, but the response to the main challenges the industry is dealing with: the lack of staff, the increase of the costs with the waging, the customers' dissatisfaction, the increase of the waiting times for the payment of the products / services, challenges which find their solving through the implementation of the self-service systems. The implementation of such solutions improves the customers' payment experience, decreasing the waiting times for the payment of the products / services, leads to the increase of the average amount spent by the customer for an order, and permits a large flexibility in the presentation of the services.
